

Juan F. Granada, MD,

Juan F. Granada, MD, is the Medical Director of the Skirball Center for Cardiovascular Research at the Cardiovascular Research Foundation. Dr. Granada is also Assistant Professor of Medicine, Division of Cardiology at Columbia University College of Physicians and Surgeons. At the Skirball Center, Dr. Granada leads a multidisciplinary research group which aims to accelerate the validation process of promising technologies before undergoing human testing in areas such as cardiac imaging, emerging endovascular therapy and tissue regeneration. Dr. Granada is a leading investigator in the field of animal models of atherosclerosis, advanced endovascular imaging and emerging cardiovascular therapies in which he holds numerous publications, book chapters, patents and awards. Additionally, he has participated in the development and successful validation of several medical technologies in the areas of endovascular imaging and endovascular devices. Dr. Granada collaborates with scientists and centers around the world supporting the development of innovative concepts to diagnose and treat cardiovascular disease.
